## **Custom HTML Advanced**

Module for Joomla!

Version 2.0

## Preface

This module is very similar to standard Custom HTML module but has the following changes:

- No filtering; `<script>` tags can be used freely;
- It is possible to override module chrome (allowing to remove boxes around the module in some module positions in some templates);

Supported Joomla versions:

- 1.5 (tested on 1.5.22)
- 1.6 (tested on 1.6.0)
- 2.5 (tested on 2.5.8)
- 3 (tested on 3.0.0)

## How to use the module

- Install the module using the extension manager (archive root directory contains module version for Joomla! 1.6 and above, j15 directory contains module version for Joomla! 1.5);
- Enter some parameters to insert custom code in module location or CSS styles or CSS file into HTML header.

## Parameters description

Parameter	Description
Custom HTML	<p>Enter your custom HTML code here.</p> <p>It is unfiltered and can include <code>&lt;script&gt;</code> tags as well.</p>
Override module inclusion style (chrome) set by template	<p>If this field is blank, the module chrome will not be overridden.</p> <p>Most useful value is <b>'none'</b> (without quotes). It will remove any additional HTML code added for specific module position by template.</p> <p>For the description of Joomla module chomes please see: <a href="http://docs.joomla.org/What_is_module_chrome%3F">http://docs.joomla.org/What_is_module_chrome%3F</a></p>
<b>HTML Header options</b>	
CSS style overrides	<p>Can include CSS definitions that will be placed into page header only on the pages the module is present.</p> <p>Allows doing template CSS overrides.</p> <p>Should contain style information such as:</p> <pre>div#header { color:red }</pre>
CSS style sheet	<p>Style sheet file (.CSS) name already existing on your web server that will be referenced in HTML header.</p> <p>So, if parameter contains <b>file.css</b> the following will be inserted into header:</p> <pre>&lt;link rel="stylesheet" href="/file.css" type="text/css"&gt;</pre>
